**Tuesday,
September 20, 2016**

**Time: 12pm to
1:30pm**

**Location: Lola Tilly
Commons, Large
Conference Room**

Email mefrey@alaska.edu
to attend via WebEx.

Finnish biomass manufacturer Volter has installed their small biomass combined heat and power system in several countries around the world, including their headquarters at Finland's Kempele Ecovillage. The Ecovillage unit has produced electricity and heat for a small microgrid serving ten houses since 2009, using locally harvested wood chips.

Join us for a presentation by Volter and learn about their pioneering expertise into the development of small scale gasification (40kW power/ 100kW heat) systems.

Presentation organized by

ACEP
Alaska Center for Energy and Power
